

# REVIT CONTENT GUIDE

**Manufacturer:** Legrand | Ortronics  
**Description:** Mighty Mo 10 Cable Management Rack  
**File:** Rack-Cable\_Management-Ortronics-Mighty\_Mo\_10.rfa  
**Type Catalog:** Not Applicable  
**Rendering file:** Not Applicable  
**Schedule file:** Schedule – Rack-Cable\_Management-Ortronics-Mighty\_Mo\_10.rvt

Rack Spaces RU	51.000000

## Type Properties

## **Loading and placing into the Project:**

One 'Data Device' family is supplied and can be loaded into a Revit project through all traditional methods. There are no family supporting files (i.e. type catalog, look up tables or render library files). The rack does not require a host model and should be placed in a plan view for maximum usability. The family's origin point is in the center of the mounting rails.

## **Project Behavior:**

This family is intended to be used with compatible components. Once placed, compatible rack mounted hardware and accessories can be snapped into place along the mounting rails where insertion references exist for each RU location.

### **Instance Parameters:**

In the "Instance Parameters", the user can control the following options:

- Equipment Number – For tagging each placed instance.
- Has [Right, Left, Back, Front] Clearance Areas – Turns the visibility of clearance area geometry on/off.
- Clearance Depth [Sides, Front, Back] – Changes the depth of the clearance area.
- Has No Fly Zone – Turns the visibility of no fly zone geometry on/off.
- No Fly Zone Depth – Changes the depth of the no fly zone.
- Has Snap Locations – Turns the visibility of the snap locations geometry on/off.
- Rack Unit Numbers are Visible – Toggles the visibility of the rack unit numbers on the right front mounting rail.
- Rear Base Angle Faces Inward – Inverts the rear base angle under the mounting rails for a narrower footprint.

### **Type Parameters:**

Each type represents a manufactured product. Therefore, the type parameters should not be modified. Please note:

- Product Documentation Link – Directs a webpage to the products online listing.
- Equipment Abbreviation – For filtering schedules. \*See scheduling description below.
- Rack Spaces RU – Indicates how many rack units the product supports.

The family contains four (4) types whose values do not need to be modified by the user for standard configuration.

**45 RU, 19"**

**45 RU, 23"**

**51 RU, 19"**

**51 RU, 23"**

Within the type properties dialogue box the user will find useful information for scheduling purposes such as: Number of Rack Spaces, Height, Width, Depth and other unique properties of the family. In "Identity Data" the user will find information specific to Ortronics and the model, i.e.: family revision information, Ortronics copyright information, part description, product URL and other specific data. \*See scheduling description below.

### **Visibility:**

For best performance, all model geometry is turned off in Plan view and represented through masking regions and symbolic lines. Users will see simplified representations of the rack features in each detail level: coarse, medium and fine. For maximum usability, all geometry is also assigned the subcategory: Racks & Enclosures.

#### **Clearance Areas:**

Clearance areas exist for each side of the rack as well as the top, and can be manipulated through the parameters listed above (Has Clearance areas, Clearance Depth, Has No Fly Zone, No Fly Zone Depth). They are represented through 3D geometry in 3D Views and by 2D symbolic lines in plan/section views. To 'turn off' this geometry across all Data Devices, turn off the subcategories: Clearance Areas, No Fly Zone.

#### **Rendering:**

When the family file is loaded into the project, standard Ortronics materials are imported. These may be modified, though ensure that the modification selection matches an actual manufacturer supplied option.

#### **Scheduling & BOM creation:**

Ortronics products may be scheduled utilizing the schedule view in the given project file. Select and copy (**Ctrl-C**) the schedule from the sheet view and paste it (**Ctrl-V**) into a sheet in your project. The schedule filters are set to look for only those units designated with **Manufacturer** as "Legrand I Ortronics" and **Equipment Abbreviation** as "CMR". The schedules contain special functionality for displaying the configured order numbers of the different selected types.
