  - Repeat for all additional room navigators
9. Navigate to: System Design>Room>Navigator>Watch>Modify
  - Move ALL zone players & endpoints to [Hidden Devices](#)
  - Repeat for all additional room navigators
10. Select - File>Refresh Navigators

## Grouping:

To group zones via programming (i.e. adding a “Party” button on a UI that starts multiple zones in sync, you must first create a Media Scene.

*Note: If a group is created from a User Interface and the “Master” zone is turned off the entire group will turn off.*

## Requirements:

The “Top 10” must be programmed in the Nuvo Player App

## Creating a “Group” Media Scene:

1. Open Composer
2. Navigate to: Agents>Media Scenes
3. Add a Media Scene
4. [NAME] the New Scene (i.e. “Party”)
5. Select “Add Room”
6. Select the rooms you want included in the scene & click “OK”
7. Set the “Initial Volume” for each room

## Activating the Media Scene [NAME] from a keypad:

1. Navigate to: Programming - Select Configurable Keypad
2. In the Programming Pane>Keypad Events>Events For: Select the button you want to program & select Single Tap
3. In the Actions Pane>Device Actions - Select the room you want to be the [MASTER]
4. In the Actions Pane>Device Actions>[MASTER] Actions>Select an Audio Device - Select the Nuvo Player for that room from the dropdown list & Double-Click the “Action” to add it to the “Script”
5. In the Actions Pane>Device Actions>“Nuvo Player” Actions - Select Device Specific Command, Select “Slot 1-10 from the dropdown list & Double-Click the “Action” to add it to the “Script”
6. In the Actions Pane>Device Actions>Media Scenes Actions>Commands - Select Activate, Based on: [MASTER], Media Scenes [NAME] & Double-Click the “Action” to add it to the “Script”

## Deactivating the Media Scene [NAME]:

1. Navigate to: Programming - Select Configurable Keypad, Custom Buttons etc...
2. In the Programming Pane>Keypad Events>Events For: Select the button you want to program & select Double Tap
3. In the Actions Pane>Device Actions>[MASTER] Actions>Select “Commands” Pause & Double-Click the “Action” to add it to the “Script”
4. In the Actions Pane>Device Actions>Media Scenes Actions>Commands - Select Deactivate & Double-Click the “Action” to add it to the “Script”

*Note: In the Nuvo Player App>Settings>General>Advanced you MUST turn on Auto Disband Inactive Groups & define the Auto Disband Timeout.*
