

The FM-105 High Frequency Occupancy Sensor is a line voltage sensor that turns lighting on and off based on occupancy, and can hold lights off when sufficient daylight is available. It detects motion via high frequency electromagnetic waves and the Doppler principle. Because it can detect motion through many dense materials other than metal, the FM-105 can be installed behind fixture lenses and hidden from view.

Features & Benefits

Adjustable time delay

Hold-off daylighting control

Line voltage occupancy sensor

Adjustable detection sensitivity

Mounting bracket for flexible installation

Mounts behind fixture lens hidden from view

Specifications
