

The Wire Mesh Security Kit is the perfect accessory to create a secure tray run in a wire mesh system. Ideal for plenum-rated high-security installations, the kit includes a solid steel liner, cover and tamper-proof locking connectors.

Features & Benefits

Complete 10-Foot Security Kit: Includes a solid steel three-sided insert, solid steel cover and three locking connectors to secure one standard 10-foot wire mesh tray section.

Tamper-Resistant Cable Protection: Connectors use tamper-resistant screws to lock the insert and cover in place, helping restrict unauthorized physical access to cables.

Fully Enclosed Tray Pathway: The insert protects cables from the bottom and both sides, while the steel cover prevents access from the top.

Broad Tray Compatibility: Available in sizes matched to CF54, CF105 and CF150 Series wire mesh tray across multiple widths, eliminating the need to transition to another tray style for secure sections.

Pregalvanized and Black Finishes: Durable steel components are available in pregalvanized or black finishes and are suitable for commercial, data center and permitted plenum-area applications. Wire mesh tray is sold separately.
